A FOREFRONT DERMATOLOGY PRACTICE

Turn back the clock with the Thermage® procedure. This non-invasive treatment uses radio-frequency technology to tighten your collagen structure and deliver tighter skin, renewed facial contours and healthier collagen.

Matthew R. Kelleher, MD,
Medical Director of Premier
Dermatology, performs gentle,
no-downtime procedures that
leave patients with the best
cosmetic results possible.

WHAT IS THE THERMAGE® PROCEDURE?

The Thermage® procedure employs a patented, FDA approved radio-frequency (RF) technology called ThermoCool™. It has been clinically proven to tighten and gently lift skin to smooth out wrinkles and renew facial contours. The incision-free procedure is fast and easy, requiring no downtime from normal activities. It's perfect for the treatment of the face and neck area, as well as the tightening of skin on the stomach, arms or other areas where tightening is desired.

THE THERMACOOL™ DEVICE

The ThermoCool™ device uses a sophisticated treatment tip called ThermoTip™ to deliver a controlled amount of RF energy. With each touch to the skin, ThermoTip™ uniformly heats a large volume of collagen in the deeper layers of the skin, while simultaneously protecting the outer layer of skin with cooling. This heating action causes deep structures in your skin to immediately tighten. Over time, new and remodeled collagen is produced, further tightening skin for a healthier, smoother, more youthful appearance.

WHAT CAN I EXPECT DURING & AFTER TREATMENT?

The ThermoTip™ device delivers a brief, deep-heating sensation to your skin. The device is cooled before, during and after heating to further protect your skin surface. Post-treatment, studies show measurable tightening improvements appear over two to six months after a single treatment, and can last up to 24 months. For most patients, a single Thermage® treatment is sufficient, though your physician will help determine the right course of treatment for you.

The Thermage® procedure has an excellent safety record with over 70,000 estimated worldwide patient treatments to-date, and is a quick and easy way to achieve tighter, smoother, more youthful looking skin. In fact, you should begin to feel a difference immediately after your session. To learn more about the Thermage® procedure, ask any Premier team member or call to schedule a consultation with Matthew R. Kelleher, MD, Medical Director of Premier Dermatology.
